

* bins

→ we can create the bins using measures (not dimensions).

→ Then these bins can be used to plot the graphs like the one above.

* Histograms

→ There is a quicker way to do this. We don't need create the bins manually.

→ Let's say we want to create the distribution of annual revenue pill. Then we will select

the pill and then click on histogram in 'show me' tab on top-right side. This will create the bins & in turn histogram for us.

→ can create bins using numerical dimensions.
